The goal of the Perinatal Hepatitis Prevention Program is to prevent perinatal hepatitis infection in infants born to women with chronic HBV and HCV. Pregnant women reported to the program will receive comprehensive case management services including a home visit and hepatitis education. Infants born to women with chronic HBV are followed by case management services to ensure immunoprophylaxis at birth, completion of the hepatitis B vaccination series, and postvaccination testing. Infants born to women with HCV infection are followed to ensure recommended testing for HCV is completed. For more information or questions contact the Perinatal Hepatitis Prevention Program at (401) 222-5921.
